THE GLASS PACKAGING FORUM CRUSHER SPONSORED BY LION NATHAN

FACTS ABOUT THE GLASS CRUSHER

SUMMARY DETAILS

The glass crusher is a versatile machine producing versatile products.

Although small, compact and highly portable the crusher accommodates the specifications of a wide range of common sizes; is versatile and adds value to the processed glass which can be used for a multitude of purposes including agricultural mulch, a filtration medium, tiles, erosion protection and has even been trialed as a pebble garden with striking effects.

CAPACITY

The crusher operates at different processing speeds dependent upon the crush size required by the customer. Typical range of sizes : 19mm to 9.5mm.

WHAT CAN THE DIFFERENT SIZES BE USED FOR?

The current material for inclusion in road base is approx 9.5mm.

19mm is the typical aggregate size for use in building slabs foundations etc.

Dependent on circumstances crushed glass use in drainage projects can be from 9.5mm to 30mm or even larger.

FINANCIAL INFORMATION

Projects quoted will be subject to inspection and assessment and dependent upon the quality and contamination of the material to be processed.
